**Do you know? We are developing a new tools and web parts to be provided for free to our clients.**

## How to Apply Paging to Large Data Repeaters using SPARK Forms Builder

[Watch the video Now!](#)

Configure and design an Advanced Repeater control to handle large data through paging from other lists using paging feature in less than two minutes on **SPARK Reports Builder**. this will reduce loading time significantly and provide a neat user friendly interface.

## Using SPARK Workflow Tasks Dashboard Web Part for Office 365

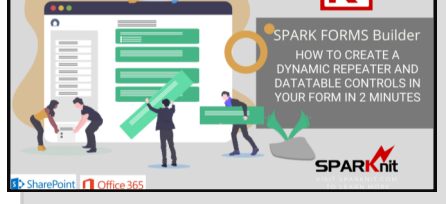

Add **SPARK Workflow** tasks dashboard in your O365 classic and modern design pages, to provide your users with informative section about their tasks and a centralized location to access and manage them easily and effectively.

## Create a dynamic Repeater and DataTable controls in your form in 2 minutes

Create a dynamic Repeater and DataTable controls in your form, and use their internal functions to build a dynamic CAML query and push it to the controls to generate related data. The entire process will only take a couple of minutes and you can generate the dynamic CAML query using the visual CAML Query Builder without the need to write it from scratch. You will see how it's easy now to build your own dynamic integration data tools and provide a new feature to your users in few minutes.

## Create/Update/Decommission an Active Directory User Using SPARK Workflow

Use the Create AD User activity to create a new user account using **SPARK Workflow**, and specify all required user information to be an active user account in the organization environment. Also, you can use the Update AD user activity to update any property about any user in the domain Active Directory and to disable or delete the user account using the Decommission AD User activity. You can configure these activities to get the information dynamically from workflow variables or list/library columns. There are other **tutorial videos** you can watch on how to integrate **SPARK Forms Builder** with these activities to create user's self-services on the SharePoint environment to request services from the IT department to create, update or decommission their own user accounts in the organization.

## Automate The Creating of an Active Directory User Using SPARK Forms Builder and Workflow

Use **SPARK Forms Builder** and **SPARK Workflow** to create self-services IT support requests to create a new Active Directory user account for an employee. The form will save the request and initiate the workflow, the

[Watch the video Now!](#)

workflow will send an approval task to the IT Manager to review and approve/reject the request. If the request is rejected, the workflow status will set to Rejected and will do nothing. If approved the workflow will create a new AD user, generate a new password for it, and send by an email to the workflow initiator "The Requester". All this will be fully automated without the need to waste the valuable IT department time.

## Automate The Creating Active Directory Group Using SPARK Forms Builder and Workflow

Use **SPARK Forms Builder** and **SPARK Workflow** to create self-services IT support requests to create a new Active Directory Group.
